Webinar objective:

The [European gas market trends and price drivers report](#) seeks to offer a comprehensive overview of the latest developments in the gas market and the progress made towards achieving an integrated EU gas market.

In this year's report, ACER and CEER analyse the drivers that led to the unprecedented price rise in European gas markets in the summer of 2022. The report highlights how the market's response to the Russian supply shock is driving the restructuring of the EU gas market, with lasting implications.

With this online event, ACER intends to:

- present the main findings of the report;
- exchange with relevant market stakeholders about the way markets are adjusting;
- address stakeholders' questions.

Background: ACER and CEER monitor and report annually on the EU markets of electricity and natural gas (the so-called Market Monitoring Reports (MMRs)). This European gas market trends and price drivers report is one of the gas [MMR series](#).
