

ACER webinar: implementation of the EU methodology for electricity adequacy metrics

Wednesday, 5 June 2024 | 10:00 - 11:30 CET

Online, MS Teams platform

AGENDA

Indicative time	Webinar items	
09:45 - 10:00	Webinar open for log-in	Starts promptly at 10:00
10:00 - 10:05	Introductory remarks Daniel IHASZ-TOTH, ACER	
10:05 - 10:50	Results of the consultancy study on adequacy metrics Johannes REICHL, Johannes Kepler Universität Linz Aaron PRAKTIKNJO, RWTH Aachen University	
10:50 - 11:25	Q&A	
11:25 - 11:30	Closing remarks Daniel IHASZ-TOTH, ACER	

Webinar objective

A stable and ample energy supply is crucial for European consumers. The security of electricity supply depends on having adequate resources in the power system to meet the demand. To maintain this level of security, Member States continuously monitor adequacy to ensure that the risk remains below the acceptable level. Adequacy metrics, set by the Member States, help determine the necessary security level of electricity supply. These metrics are calculated using a [common methodology](#) by national regulatory authorities.

Through its [monitoring of EU electricity supply security](#), ACER observed substantial discrepancies in the calculated metrics. The reasons of such discrepancies are not straightforward and to better understand them and determine if further methodological coordination is needed, ACER commissioned consultants, Johannes Kepler Universität Linz and RWTH Aachen University, to conduct a study on the topic.

The aim of this webinar is to present and discuss with stakeholders the main findings of ACER's consultancy study, focusing on:

- understanding the relevance of Europe's adequacy metrics in assessing the security of Europe's electricity supply;
- exploring key divergences in deriving adequacy metrics in different Member States;
- drawing input from interested stakeholders on possible ACER recommendations to facilitate the calculation of adequacy metrics in Europe.
