

Corrigendum

of 4 September 2019

to Consolidated report on the progress of electricity and gas projects of common interest, 27 June 2019

On page 5:

for:

1.2.4 Costs and benefits

The investment costs for the electricity PCIs, as reported by the promoters, amount to €49.5 billion (in 2019 values), while for the gas PCIs they amount to €42.9 billion. The cost tag is actually even higher, since the expected life-cycle costs of the projects also have to be considered. These figures represent an increase of less than 2% for electricity PCIs and of 1.5% for gas PCIs compared to the expected overall budget of the same projects in 2018.
