

Corrigendum

of 3 December 2024

to Box 1 and Footnote 104 of the European Union Agency for the Cooperation of Energy Regulators of 19 November 2024 on the Hydrogen Market Monitoring Report

In Box 1:

for:

The electrolyser is in a bidding zone with an emission intensity of electricity below 18 grams of CO₂ equivalent per megajoule (18 g CO_{2e}/MJ) (approximately 65 g CO_{2e}/MWh) for at least one of the preceding 5 years, and the temporal and geographical correlation is fulfilled.

read:

The electrolyser is in a bidding zone with an emission intensity of electricity below 18 grams of CO₂ equivalent per megajoule (18 gCO_{2e}/MJ) (approximately 65 gCO_{2e}/kWh) for at least one of the preceding 5 years, and the temporal and geographical correlation is fulfilled.

In Footnote 104:

for:

According to EUROSTAT, the current share of renewable electricity in all Member States is less than the 90% threshold set by the delegated regulation on RFNBOs for hydrogen to qualify as renewable (see Box 1). Based on reporting from the European Environment Agency, the emissions intensity in the electricity sector in Finland, France, Luxembourg and Sweden was already lower than the threshold of 18 gCO₂/MJ (65 gCO₂/kWh) for at least 1 year since 2019, these figures are not necessarily compatible with the methodology set out in the relevant delegated regulation.
